

Stefanos Ifoulis

Full-Stack Software Engineer · Java, Spring Boot, React, Microservices

Thessaloniki, Greece | +30 694 604 8891 | Ifoulis.Stefanos@gmail.com | github.com/stefanif2002 |
linkedin.com/in/stefanos-ifoulis | EU citizen · Remote-ready

Full-stack engineer who designs and ships complete enterprise systems end to end — from requirements to Linux production deployments. Experience designing and delivering three enterprise platforms using Java, Spring Boot, React and TypeScript, including a microservices-based CRM/ERP platform, leveraging REST APIs, MySQL & MongoDB, Redis, Keycloak authentication, Stripe payments, event-driven RabbitMQ messaging and other third-party integrations.

TECHNICAL SKILLS

Backend Java, Spring Boot, Spring Cloud (Gateway, Eureka), Microservices, REST APIs, RabbitMQ

Frontend React, TypeScript, Vite, Ant Design, DevExtreme, i18n

Data MySQL, MongoDB, Redis, SQL, database design, Flyway migrations, query optimization

Infrastructure Docker & Docker Compose, Linux, Nginx, Keycloak, Git

Tools & Integrations Stripe (Checkout, webhooks), SendGrid

Testing & Observability k6 load testing, Prometheus, Grafana, Loki, Tempo (metrics, logs, traces)

PROFESSIONAL EXPERIENCE

Founder & Full-Stack Software Engineer — Car-Rental CRM/ERP Platform

May 2024 – Present

Thessaloniki, Greece

- **Architect and sole engineer of a CRM/ERP** platform and public booking site for car-rental companies, in production with **pilot client 4Rent S.A.** — bookings, customers, vehicles, availability, calendars, payments, incident and accident management.
- Built **12 Spring Boot services (10 domain** microservices, API **gateway**, Eureka **discovery**) with React/TypeScript frontends, MySQL/MongoDB persistence, Keycloak auth, RabbitMQ event-driven messaging and Redis (caching, rate limiting, distributed locks), Dockerized and deployed on Linux/Nginx.
- Developed **SmartRearrange**, a configurable booking-to-fleet assignment and rearrangement algorithm that maximizes owned-fleet utilization under operational constraints.
- **Cut a core booking query from 7.9 s to 0.25 s (~30× faster)** with DTO projections and server-side pagination; added Flyway migrations, RFC 7807 error handling and a Prometheus/Grafana/Loki/Tempo observability stack.
- Integrated Stripe Checkout with webhook-driven payment confirmation and 30-minute booking holds on a multilingual public booking website integrated with the CRM platform.

Full-Stack Software Engineer — Biogas Lagadas S.A. / Smart Methane

Mar 2024 – Nov 2024

Thessaloniki, Greece

- Developed a custom enterprise information system for the EU co-funded Smart Methane project under Greece's NSRF program, based on specifications from Aristotle University of Thessaloniki's School of Agriculture.
- Implemented with Spring Boot, React, TypeScript, Ant Design/DevExtreme, MySQL and Keycloak; containerized with Docker and deployed on a Linux server.

Full-Stack Software Engineer — Ergoplanning S.A.

Aug 2023 – Nov 2023

Thessaloniki, Greece

- Built a web-based agricultural operations calendar system aligned with the Agro 2-1 / 2-2 integrated-management standards. **Reduced agricultural calendar preparation time from 8 hours to 20 minutes.**
- Implemented fertilizer, plant-protection and crop modules, OSDE XML import and PDF calendar generation, using Spring Boot, React, TypeScript, Ant Design, MongoDB and Docker on a Linux server.

EDUCATION

B.Sc. in Computer Science — Aristotle University of Thessaloniki

Oct 2020 – Nov 2026 (expected)

Software Technologies track. Thesis (submitted): *Comparison of MySQL and MongoDB for tourism information systems built with a microservices architecture*. Benchmarked both engines under equal resource caps — a 42-experiment k6 matrix plus YCSB (1M records, 64 threads) — on p95/p99 latency, throughput and CPU/RAM efficiency; indexes boosted exact-match read throughput up to 650×.
